IMPORTANT WARNING AND SAFEGUARDS

This product may contain chemicals known to the state of California to cause cancer and or birth defects or other reproductive harm. Wash your hand after handling this product.

It is your sole responsibility to verify that the plug and the receptacle are clean and free of moisture and salt build up at all times. The receptacle must be free of water, salt, calcium, magnesium and dust. Failure to do so can cause fire, damage to property, permanent damage to the product and personal injury not limited to loss of life.

Do not plug into extension cord/power strip.

Manage in accordance with disposal laws
See: www.lamprecycle.org

A drip loop must be used when plugging all electrical aquarium devices. A drip loop is that part of the cord hanging below the receptacle.

The national code requires that a GFCI (Ground fault circuit interrupter) be used in the branch circuit supplying all power to water pumps and electrical aquarium equipment. If you do not have a GFCI, have an electrician install one prior to operating any aquarium component.

Read and follow the guidelines to ensure the proper use and application. Failure to follow these guidelines may result in light fixture damage, electrical shock, fire and/or injury.

1. Use this product for its intended use only.
2. Never yank or pull the cord from the electrical outlet.
3. Do not place the light fixture directly on top of the aquarium without using the hanging kit
4. Do not operate if the plug or wire is damaged.
5. The light fixture is not to come in contact with water.
6. The light fixture must be turned off/disconnected from the power supply before any maintenance is done to either the light fixture or the aquarium.
7. Verify that hands are dry prior to disconnecting the power.
8. To reduce the risk of electrocution keep all connections dry.
9. If the light fixture falls or comes in contact with water/excess moisture, unplug the light fixture from the power supply immediately before removing. Failure to do so may cause electrical shock or injury.
10. The light fixture and connections need to be free of water, moisture and salt build up at all times. Failure to do so will cause electrical arcing resulting in possible fire or electrical shock.
11. Do not place above an open top aquarium.

CAUTION:

When upgrading lights from an existing aquarium certain precautions need to be taken. When changing any lighting on an established aquarium there will be a variance of light intensity and or color temperature of lighting and animals will take time to adjust. It may be necessary to raise the light, reduce light cycle and even change the position of corals/animals. Always consult with your local fish store for proper procedures when changing lighting from an existing aquarium.
